The Mountain Home Chapter, along with some members from the other chapters, built a bridge over one of the creek crossings on the Danskin Trail System on July 13. Ron from the USFS was overseeing the project and met us at the Bender Creek Trail-head at 8 a.m.

With the number of volunteers we had, it did not take more than about 4-6 hours to complete the project. We had an early start because we wanted to be completed before it got really hot. The club and the Forest Service provided all the tools. We had a total of members in attendance. A special thanks to the Boise Chapter who came out and helped build the bridge.
